Privacy and data security

Approach to information security

We share our Information Security Policy with group companies worldwide as a basis for reinforced information security.

Information security management

The Information Security Committee is implementing enhanced information security measures through the PDCA cycle. We reliably address issues by identifying internal and external information leaks as they occur worldwide and reinforce information security on a timely basis.

Information security achievements

To thoroughly educate and motivate employees to adhere to Information Security Policy, we institute regular in-house educational programs.

Approach to data privacy

We recognize our social responsibility to properly handle personal information in full compliance with the respective personal information protection law in each jurisdiction. We formulated the Global Data Privacy Policy[1] to ensure a unified global approach to the use of personal information, including customer data. This policy ensures that the handling of information is consistent and treated as an important duty at all Nissan sites. This policy sets out Nissan's basic commitment to privacy.

Data privacy management

We have set up internal governance systems, rules, and procedures for handling personal data. Global governance is organized such that regional data privacy leads work together with the Global Compliance Office for coordination and, through their Regional Compliance Officers, ultimately report to the Global Compliance Committee. Nissan Group companies are fully enforcing these processes where required.

Data privacy achievement

The privacy teams are improving processes, in particular, when supporting Nissan functions handling personal data as they implement relevant data privacy controls.
